AquaDuct

Improve your workflow efficiency and simplify the movement of your media to and from your Avid edit suite with **AquaDuct**.

AquaDuct is compatible with Avid products such as MediaComposer 6, Interplay, and ISIS enabling you to seamlessly integrate your Avid suite with your media asset management system. When combined with other Suitcase TV products AquaDuct can increase efficiency in your workflow and make substantial time saving. Your workflow will immediately become more flexible and facilitate remote and off-line working.

AquaDuct allows the transfer of media from a central storage platform to an Avid workstation or workgroup. The system tray icon lets the user know that media has arrived in their "workspace" and is ready for them to use. Then, when the completed edit is ready, the user can drag and drop the new media into the system tray icon and a copy of the new programme, promo or clip will be sent to the desired location.

For a more sophisticated workflow, AquaDuct can operate with Aqua to enable the workstation operator to submit requests for media to be delivered to their workspace. Alternatively these requests can be made through web service interfaces or other workflow tools.

The most powerful and efficient combination is AquaDuct and Aqua Splice. As Splice enables users to perform simple edits remotely, or to create an edit decision list (EDL), this means that a fast pre-edit can be used to reduce the over-all amount of media to be transferred to the Avid suite for craft editing. Utilising your Avid suite time and your network traffic can be kept to a minimum.

Benefits

- Improved workflow efficiency
- Faster editing throughput
- Facilitates remote and off-line working
- No restriction on geographic location

Technical Data AquaDuct Options

AquaDuct is available in three modes:

- Client-to-Server
- Client-to-Client
- Server-to-Server

Client licences are available as single workstation licences. Client-to-Client enables unidirectional traffic only. A single server license can serve up to 10 clients.

AquaDuct Client

Product Code: AQUA-DUCT-AC

Workstation based software application, part of the Aqua range. For transfer of media to, from and between Avid workstations and/or Avid work groups.

Compatible with

Avid Media Composer, Avid ISIS, Avid Unity, Avid Interplay.

AquaDuct Server

Product Code: AQUA-DUCT-SERV

Server based software application. For transfer of media between AquaDuct Client from/to remote or central storage platforms.

Compatible with third party servers

Omneon MediaGrid, Omnibus Columbus TX, SeaChange, Quantel sQ, Harris.

Pre-requisites

Software

Available to run on pre-existing or new MediaStor installations.

AquaDuct Server is also available on a single 1U processor unit pre-packaged with MediaStor. Please email sales@suitcasetv.com for further details.
